Of interest to Building consent authorities, Territorial Authority, Designers, Developers, Engineers

ISBN: 978-1-98-851771-1 (Print) / 978-1-98-851770-4 (Online)

Introduction

This guidance covers the consistent planning approach that will make it easier for councils to prepare Resource Management Act policies and plans, and to process resource and building consent applications. This guidance will assist all parties associated with the use and development of land in potentially liquefaction-prone areas.

Contents

A number of significant liquefaction events have occurred in recent years. Land use planning, together with resilient building and infrastructure design that recognises the risks of liquefaction and guides development, has the potential to reduce the consequences of future events.

Developed jointly by MBIE, the Ministry for the Environment and EQC this guidance relates specifically to liquefaction-prone land.
