

Managing buildings

Commercial, public and multi-unit residential building manager responsibilities.

Building managers play an important role in ensuring commercial, industrial, public, communal and multi-unit residential buildings are safe, healthy and durable. Unlike detached dwellings, certain extra rules can apply to these types of buildings, related to their use or any extra risk factors.

As well as meeting annual Building Warrant of Fitness requirements, building managers need to be aware of building work and upgrade requirements, ensure the building is structurally sound and understand their role following an emergency.

If you are a building manager (or employee or tenant acting on behalf of a building owner) you should understand the building owner's rights and obligations, as well as your contractual agreement.
